

Hi Eric and the EESTech Organizing Team,

Thank you so much for putting together this hackathon!

We really loved the project theme. Choosing a topic with a high real-life relevance and current importance made the entire challenge engaging and fun to work on.

We also wanted to give a huge shoutout to you personally. Having you there to help us troubleshoot was fantastic, and your support made a massive difference for our team.

Since you asked for feedback, we wanted to share a few thoughts.

While the initial day dedicated to installing the software was well-thought, DEEPCRAFT turned out to be quite a complex and somewhat buggy ecosystem that almost every team struggled with at some point. A collection of tutorials or documentation of the software would be really helpful. Alternatively, we could have received the installation guides and a brief introduction to DEEPCRAFT 3 or 4 days before the event to familiarize ourselves with it.

Also an extra mentor dedicated strictly to software troubleshooting would have been beneficial to keep teams from getting blocked by trivial problems and work on solving the real task.

Overall, it was an awesome experience, and we are really grateful for your time, energy, and guidance throughout the event.

Best regards,

Team Maeron
